FATEQ TECHNOLOGIES

Teamcenter PLM Professional Service Catalogue

Independent Technical Consulting, Architecture & Process Advisory Packages

Prepared By: Syed Abdul Hairu | Principal Teamcenter PLM Solution Architect

Business Entity: FATEQ Technologies | Independent Teamcenter / PLM Consulting & Technical Services

Catalogue Release: Version 2026.1 (Initial Offering Catalogue)

Target Technologies: Siemens Teamcenter 2606, Active Workspace, NX CAD, BMIDE, AIG/T4S, Opcenter MOM/MES

Initial Offering Disclaimer:

This document represents an initial service offering catalogue establishing FATEQ Technologies' consulting capabilities, methodology frameworks, and engagement boundaries. Proposed service capabilities are distinguished from proven client delivery experience. FATEQ Technologies operates as an independent consulting provider and is not affiliated with, authorized by, or endorsed by Siemens Digital Industries Software.

EXECUTIVE SUMMARY & SERVICE OFFERING OVERVIEW

FATEQ Technologies delivers independent, specialized Teamcenter PLM consulting, system architecture, data governance, and technical advisory services. Designed specifically for manufacturing enterprises, engineering organizations, and industrial IT heads, our structured service packages address critical product lifecycle challenges—ranging from legacy PDM customization debt and EBOM-to-MBOM shop-floor disconnects to complex software upgrades.

Service Offering	Core Business Focus	Indicative Duration	Primary Deliverable
1. Teamcenter PLM Maturity Assessment	Comprehensive baseline audit across governance, PDM, BMIDE, ECO workflows, multi-BOM, and adoption.	3–4 Weeks	Maturity Scoring Report, Gap Analysis & 12-Month Roadmap
2. Teamcenter Upgrade Readiness Assessment	Technical risk audit covering BMIDE, custom ITK C++, Active Workspace XRT, CAD/ERP fit, and DB health.	2–3 Weeks	Upgrade Readiness Report, Go/No-Go Gates & Cutover Strategy
3. PLM Governance & Process Improvement	Process re-engineering for 100% EBOM accuracy, closed-loop ECR/ECO control, and PDF/DXF release rules.	4–6 Weeks	Governance Operating Model, Standard Workflows & Control Matrix

1. TEAMCENTER PLM MATURITY ASSESSMENT

1.1 Service Overview & Business Problem: Manufacturing organizations frequently suffer from underutilized PLM investments, fragmented CAD data silos, manual spreadsheet-based BOM management, and prolonged change order lead times. This service provides a holistic evaluation of the enterprise Teamcenter footprint to identify technical debt, process gaps, and adoption barriers.

1.2 Ideal Client Profile & Engagement Triggers: Industrial discrete manufacturers using Teamcenter (versions 11.x to 2606) facing slow ECR/ECO cycle times (>15 days), shop-floor assembly scrap caused by drawing mismatches, low user adoption, or preparing for strategic digital thread expansion.

Domain	In-Scope Assessment Focus	Out-of-Scope Exclusions
Governance & Admin	User role hierarchies, group access ACLs, preference rules, license utilization	Active Directory domain re-architecting
PDM & CAD Integration	NX/MCAD attribute mapping, 3D JT rendering, FMS/FSC client cache setup	Native CAD file repair or geometry remodeling
BMIDE Data Model	Custom item types, LOVs, property rules, custom C++ ITK script inventory	Writing or refactoring production BMIDE code
Engineering Change	PR/ECR/ECN workflow task trees, review gates, impact analysis rules	Executing active engineering change orders
EBOM / MBOM Alignment	120% Master BOM structures, Easy Plan process planning fit, ERP sync readiness	Physical shop-floor layout re-engineering

FATEQ 5-Level PLM Maturity Framework:

- Level 1 (Initial/Ad-Hoc): Unmanaged local CAD files, spreadsheet BOMs, email-based change sign-offs.
- Level 2 (Defined Baseline): Managed PDM check-in/check-out, basic BMIDE schema, standardized ECO task trees.
- Level 3 (Managed Digital Thread): Active Workspace embedded CAD, 120% Master BOM, automated Dispatcher JT rendering.
- Level 4 (Integrated Enterprise): Easy Plan MBOM derivation, AIG/T4S ERP sync, OData Power BI analytics dashboards.
- Level 5 (Optimized & Intelligent): Teamcenter Copilot AI discovery, automated Scope 3 Makersite LCA footprinting.

Key Deliverable	Description & Contents	Acceptance Criteria
Maturity Assessment Report	Detailed domain scoring across 8 core areas with root-cause finding breakdown	Formal review sign-off by Client Engineering/IT Head
Gap Analysis & Risk Register	Prioritized matrix of technical debt, security gaps, and upgrade blockers	Includes costed impact and risk mitigation options
12-Month Digital Roadmap	Phased implementation plan with 90-day quick wins and KPI target metrics	Aligned with corporate IT budget and resource capacity

2. TEAMCENTER UPGRADE READINESS ASSESSMENT

2.1 Service Overview & Technical Need: Upgrading major Teamcenter releases (e.g., from version 11.x/12.x to Release 2606) carries significant risk of business disruption, custom script failure, and data schema corruption. This specialized technical audit evaluates platform health, identifies upgrade blockers, and formulates a risk-mitigated cutover strategy.

2.2 Ideal Client Profile: Organizations running legacy Teamcenter releases facing end-of-standard-support deadlines, planning transitions from Rich Client (RAC) to Active Workspace HTML5, or experiencing high technical debt from legacy custom ITK C++ code.

Technical Audit Domain	Evidence Required for Review	Upgrade Blocker Risk Criteria
BMIDE Data Model & Schema	BMIDE project templates, custom business objects, property rules	Deprecated attributes or unmanaged schema modifications
Custom Code & ITK Scripts	Source code repository, custom C++/Java handlers, RAC plug-ins	ITK functions deprecated in target 2606 API release
Active Workspace Stylesheets	XRT rendering XMLs, custom tile definitions, command visibility	Legacy RAC XML stylesheets incompatible with AWC 2606
CAD & ERP Integrations	MCAD integration software versions, AIG/T4S mapping scripts	CAD or ERP software releases unsupported by target PLM matrix
Infrastructure & Database	DB character set (UTF-8 check), FSC cache topology, Vault logs	Non-UTF8 DB encoding blocking Easy Plan / AWC deployment

FATEQ 4-Environment Upgrade Gate Strategy (Dev -> QA -> UAT -> Production):

- Gate 1 (Dev Consolidation): 100% BMIDE schema build success; zero compilation errors in refactored C++ handlers.
- Gate 2 (QA Regression): Automated Dispatcher 3D JT rendering verification; full CAD check-in/check-out validation.
- Gate 3 (UAT Business Sign-Off): ECR/ECO end-to-end workflow execution; ERP integration payload confirmation.
- Gate 4 (Production Cutover): Deployment Center 7-Step Lifecycle execution under 12-hour weekend downtime window.

Deliverable Asset	Detailed Description	Acceptance Criteria
Upgrade Readiness Report	Full inventory of customizations, ITK script health, and compatibility matrix	Clear Go/No-Go recommendation with blocker mitigations
Test & Validation Plan	UAT test scripts covering core CAD, BOM, Change, and ERP scenarios	Approved by Client QA Manager and PLM System Owner
Cutover & Rollback Strategy	Step-by-step weekend deployment runbook leveraging Deployment Center	Validated backup and dry-run rollback timing (<2 hours)

3. PLM GOVERNANCE & PROCESS IMPROVEMENT

3.1 Service Overview & Business Problem: A properly configured PLM software engine fails to deliver business value if operational processes remain informal, unstandardized, or unenforced. This engagement establishes robust engineering data governance, 100% EBOM accuracy, closed-loop change control, and auditable PDF/DXF release mechanisms.

3.2 Ideal Client Profile: Discrete manufacturers experiencing high scrap and rework costs (>3% of revenue), frequent drawing revision confusion on the shop floor, uncoordinated ECO releases, or non-compliance during regulatory quality audits.

Governance Domain	Current State Deficit (As-Is)	Proposed Target State Control (To-Be)
Item & Revision Control	Inconsistent naming; local part number generation in CAD	Standardized BMIDE auto-numbering and ECLASS CST classification
EBOM Structure Quality	Missing mass/material attributes; loose CAD assembly links	Mandatory mass precedence rules (Actual > Design) & release gates
Engineering Change (ECO)	Paper/email approvals; missing downstream impact trees	Closed-loop change (TC010231) holding shop-floor work orders
Released PDF / DXF Control	Manual export to network drives; unmanaged shop drawings	Automated background Dispatcher PDF generation on release
Access Management	Overly permissive user groups; weak IP security ACLs	Strict project-based Row-Level Security (RLS) & Access Control Lists

Phase / Timeline	Process Improvement Focus	Target Operational KPI
Phase 1 (Months 1–2)	Data Cleansing & Mass Property Standardization	Non-zero mass attribute coverage > 98% across active BOMs
Phase 2 (Months 3–4)	Closed-Loop ECR/ECO Workflow Standardisation	Change Order turnaround time reduced by 50% (to <10 days)
Phase 3 (Months 5–6)	Dispatcher Automated PDF Generation & Access Control	100% elimination of outdated PDF drawings on shop floor
Phase 4 (Months 7–12)	Easy Plan MBOM Handover & Supplier Quality Portal	EBOM-to-MBOM alignment accuracy > 99.0%; COPQ reduced 40%

SUMMARY OF DELIVERABLES & ENGAGEMENT COMPARISON

The table below provides a side-by-side comparison of all three FATEQ Technologies initial consulting service packages, outlining primary business objectives, typical engagement durations, core deliverables, and optional follow-on technical services.

Service Dimension	1. PLM Maturity Assessment	2. Upgrade Readiness Assessment	3. Governance & Process
Primary Objective	Evaluate PLM capability maturity & align IT with business goals	Identify upgrade blockers & build cutover risk mitigation plan	Standardize engineering processes, BOM quality & ECO rules
Indicative Duration	3 to 4 Weeks	2 to 3 Weeks	4 to 6 Weeks
Target Audience	VP Engineering, CIO, Industry IT Head	PLM System Admin, IT Director	Engineering Manager, Quality Lead, Operations Lead
Core Deliverable	Maturity Scoring Report & 12-Month Digital Roadmap	Upgrade Readiness Audit & Cutover Runbook	Governance Operating Manual & Standard Workflows
Data Inputs Needed	BMIDE XMLs, Workflow logs, CAD sample files	ITK source code, Server log files, DB character set	As-Is ECO forms, Drawing release SOPs, RACI charts
Optional Follow-On	Roadmap execution PMO, Easy Plan deployment	Deployment Center upgrade execution, Code refactoring	Supplier Quality Hub setup, Power BI dashboarding

Service Offering Definition & Quality Assurance Checklist

' Clear Engagement Boundaries: All services distinguish proposed advisory capabilities from proven pro
' Actionable Deliverables: Every service package specifies exact report assets, templates, and acceptar
' Realistic Durations: All timelines are clearly flagged as indicative and subject to client environment s
' Zero Siemens Affiliation Claim: FATEQ Technologies operates strictly as an independent consulting pr
' Technical Rigor: Grounded in official Teamcenter 2606 architecture, BMIDE, AIG, and Deployment Cen
